Reg no: 25BAI10533

Branch: CSE AIML

Year: 2026-27

Course Code: CSE0001

Date: 29-03-2026

Task 1: Create a Digital Literacy Awareness Infographic

For this project, I used Canva to design a digital literacy awareness infographic. The tool was very easy to use and provided a variety of templates, icons, and color options which helped me create an attractive and well-structured design.

My infographic presents key aspects of digital literacy, including what digital literacy means, useful digital tools for students, safe internet practices, professional online presence, and email etiquette. I organized the content into different sections with clear headings and icons so that it is easy to understand and visually appealing.

One thing I found challenging was selecting the right layout and arranging all the information in a clean and balanced way without making the design look crowded. However, I also found it interesting to experiment with different colors, fonts, and icons

to improve the overall look of the infographic. This task helped me enhance both my creativity and understanding of digital literacy.

Task 2 Build Your Student Digital Portfolio

For my digital and professional growth, I have chosen to use GitHub, LinkedIn, and Kaggle as key platforms. GitHub is mainly used for hosting and managing code, where I can upload my projects, track my progress, and collaborate with others. LinkedIn is a professional networking platform that helps me connect with industry professionals, showcase my skills, and stay updated with career opportunities. Kaggle is a platform focused on data science and machine learning, where I can practice datasets, participate in competitions, and improve my analytical skills.

Over the next four years, I plan to actively use GitHub to build and maintain a strong portfolio of projects related to Python, AI, and machine learning. On LinkedIn, I aim to regularly update my profile, share achievements, and connect with recruiters and professionals in my field. On Kaggle, I will work on real-world datasets and competitions to strengthen my practical knowledge. These platforms will help me develop skills, gain exposure, and prepare for future career opportunities in AI and technology.

Task 3 Explore Coding & Collaboration Platforms

For this task, I used HackerRank and Google Forms as my main platforms. On HackerRank, I practiced coding problems, mainly focusing on basic programming concepts and problem-solving skills. It helped me improve my logical thinking and understand how to write efficient code. I worked on

simple challenges that strengthened my understanding of Python and built my confidence in coding.

On Google Forms, I created a digital literacy awareness quiz. I designed multiple-choice and short-answer questions related to topics like safe internet practices, useful digital tools, and email etiquette. This helped me understand how to present information in an interactive and user-friendly way.

These tools will be very helpful for me academically. HackerRank will support my programming skills, which are essential for my CSE (AI-ML) course. It will also help me prepare for coding tests and placements in the future. Google Forms will help me in creating surveys, quizzes, and collecting data, which is useful for projects and research work. Overall, both platforms are important for improving my technical and practical knowledge.

Task 4 Draft a Professional Email & Etiquette Guide

A situation where poor digital communication caused a problem can be seen when a student sent an email to a professor without a clear subject line and used informal language. The message was vague and did not clearly explain the issue, which led to confusion. As a result, the professor misunderstood the request and did not respond on time, causing the student to miss an important deadline.

This problem could have been avoided by following proper email etiquette. The student should have used a clear subject line, a polite tone, and explained the situation in a structured manner. Including all necessary details and being respectful would have made the communication more effective. Clear and professional digital communication helps avoid misunderstandings and ensures timely responses.

Task 5 Cybercrime Awareness Case Study & Prevention Guide

While researching the topic of online safety and cybercrime prevention, what surprised me the most was how easily people fall victim to UPI and online payment fraud. Many scams do not require advanced technical skills; instead, attackers take advantage of human mistakes such as sharing OTPs, clicking unknown links, or scanning random QR codes. I realized that even educated users can become victims if they are not careful.

As a result, one habit I will personally change is being more cautious while making online transactions. I will always verify the source before approving any payment request and will never share my OTP or UPI PIN with anyone. I will also avoid clicking on suspicious links and ensure that I use only trusted platforms for financial activities. This awareness will help me stay safe online.

Conclusion

In conclusion, this project helped me understand the importance of digital literacy and responsible online behavior. Through different tasks, I learned about safe internet practices, professional communication, cybercrime awareness, and the effective use of digital platforms like GitHub, LinkedIn, and Kaggle. Creating infographics, quizzes, and case studies improved both my technical and creative skills. It also made me more aware of online risks and how to prevent them. Overall, this project enhanced my knowledge and will help me use digital tools more safely and effectively in my academic and professional journey.
